

Siraat's Kitchen · Flow System

v4 · Review brief for Homestead

Version 7 October 2026. Status: fully specified, all emails designed and built as templates.

Nothing is live in Klaviyo yet. Designs: Figma v4, <https://www.figma.com/design/ahGP2wWoVlif8ETXcBq1Dj> (one page per flow, every email with subject A/B and preview text).

1. Why we rebuilt

Baseline (last 90 days, 9 Jul to 6 Oct 2026, Klaviyo attribution): flows earned \$416,090, **10.8%** of total revenue (\$3.87M). All email together: 18.7%.

FLOW	SIRAAT RPR NOW	KLAVIYO AVERAGE	KLAVIYO TOP 10%
Welcome	\$0.70	\$2.65	\$21.18
Checkout abandonment	\$2.36	\$3.65 (cart benchmark)	\$28.89
Cart abandonment	\$1.47	\$3.65	\$28.89
Browse abandonment	\$0.97	\$0.95 to \$1.07	\$7.05
Post-purchase	\$0.31	\$0.38	\$5.27
Winback	\$0.20	n/a	n/a

Checkout recovery: 0.97% of all checkout starters. Our target is the Klaviyo average, not the top 10% (high AOV, giveaway-driven list). Base scenario: flows from 10.8% to about 17% of revenue.

The biggest issues we found in the current flows

#	ISSUE	EVIDENCE
1	Cart block showed free gifts instead of the product	In 40 of 100 real checkouts the paid product fell outside the three items shown; \$0 gift lines came first. 47% of Added to Cart events are auto-added gifts.
2	No tailoring by product category	Apron, board, pot, deep pan and pizza steel buyers all got pan emails (15% of checkouts, 9.5% of orders have no pan).
3	Offer and cart at the bottom	Offer missing from the hero in 27 of 31 emails; cart block 1 to 2.5 screens down (C2: at 2,800 of 3,919 px).

#	ISSUE	EVIDENCE
4	Timing not based on data	Welcome split at minute zero sent buyers into the prospect path; "now your pan is here" emails sent before delivery (median 11.7 days); welcome plus failure-to-launch meant 18 emails.
5	Overlap between flows	Two triggers per abandonment flow (Shopify and Triple Pixel); welcome and browse overlap raised unsubscribes (7.24% vs 5.14%).

2. The system at a glance

#	FLOW	TRIGGER	GOAL	EMAILS PER PERSON (VARIANTS)
1	Checkout abandonment	Checkout Started, value > 0	Recover checkout	4 (10)
2	Cart abandonment	Added to Cart (gifts excluded)	Recover cart	3 (6)
3	Browse abandonment	Viewed Product (Klaviyo onsite)	Turn a view into a cart	2 (5)
4	Welcome	Added to pop-up list	First order	5 (8)
5	Post-purchase	Placed Order	Use, trust, second order	3 (13)
5b	Post-purchase delivery (helper)	Delivered Shipment	First-egg email on delivery	1
6	Winback	Placed Order, then wait	Second order	2 (7)
7	Site abandonment (new)	Active on Site	Catch visits without a product view	2
8	Sunset (new)	Segment "unengaged 120d"	Re-permission or suppress	2

#	FLOW	TRIGGER	GOAL	EMAILS PER PERSON (VARIANTS)
9	VIP (new)	Placed Order, 2nd order	Third order, loyalty	2 (3)
10	Anniversary (new)	First order with cookware	Service at 6 months, offer at 12	2 (3)
11	UGC first egg (new)	Delivered Shipment, 1st order	Customer photos	1
	Review request	unchanged, live		

3. Flow by flow

Notation: TS = trigger split, CS = conditional split. "Until 09:00" = Klaviyo delay "X days, until 09:00" in the profile's time zone. Every sales email has a send filter "Placed Order zero times since starting this flow". Category lists: **COOKWARE** = exact product titles of all pans, pots, pizza steel, roasting pan and bundles; **SET** = exact set titles; **COOK WORDS** (substring OR on product name) = Hammer, Pan, Pot, ookware, Everything, fanne, Prep Bundle. Code = see the code router in section 4.

3.1 Checkout abandonment

Filters: no order since start, not in this flow for 14 days, no post-purchase email in 7 days. Re-entry 14 days.

STEP	WAIT (WHY)	SPLIT / ROUTER (EXACT CONDITION)	EMAIL	SUBJECT
0	none	CS random sample 50%: v4 path or best old path (T01)		
1	30 min (14.3% buy on their own within 15 min, only +2.5 pp by 30 min)	none	c1	Something s you at check
2	none	TS Items contains any of COOKWARE + SET	yes: cookware path, no: accessory path	
3	1 day, no time (77% of C1's effect lands within 24 h)	CS Placed Order at least once ever: yes skip, no send	c2 / c2 - acc (accessory)	Has the pan your cart ac been tested Yours, or a g Both work.

STEP	WAIT (WHY)	SPLIT / ROUTER (EXACT CONDITION)	EMAIL	SUBJECT A
4	2 days until 09:00, day 3 (recovery 8.7% at 24 h, 10.6% at day 3)	TS Items any of SET, else \$value >= 300: c3-s. Else Pan Pro titles AND \$value < 250: c3-p. Else none. Accessory path: existing customer skip, else c3-acc	c3-s / c3-p / c3-acc	\$70 in gifts : with your se One pan, or three for \$3. Most kitchen start with the pan
5	2 days until 09:00, day 5 (day 3 to 7 still +1.7 pp; a 48 h code fits that window)	CS Country = US; else TS Customer Locale = en-US and no country; else INT		
6	none	Code router, pool C4_10_48H	c4-us / c4-int (or -nocode)	10% off you cart, for 48 hours / Last reminder: yc cart and 4 g

Exit day 7 (after that, under 0.3% chance per day).

3.2 Cart abandonment

Trigger filters: Price > 0; product name excludes Mystery Gift, E-Book, Free Shipping, Giveaway. Filters: no Checkout Started or order since start, no checkout email in 7 days, not in flow 14 days.

STEP	WAIT (WHY)	SPLIT / ROUTER	EMAIL	SUBJECT A	CODE
0	none	T01 50%			
1	30 min (only +1.0 pp buy on their own between 30 and 60 min; old 15-min arm \$2.90 vs \$2.27)	CS Added to Cart where Product Name contains COOK WORDS, last 1 day	k1 / k1-acc	One pass with a damp cloth. / Picked it out? It's still here.	HI10
2	1 day (cart orders come slower, median 9.5 h)	CS Placed Order at least once ever (cookware path only)	k2-returning / k2-new	Adding to your Siraat kitchen? / The pan you keep replacing is the expensive one	HI10

STEP	WAIT (WHY)	SPLIT / ROUTER	EMAIL	SUBJECT A	CODE
3	2 days until 09:00, day 3 (recovery 5.8% at 24 h, 7.2% at day 3); accessory path waits 3 days, no K2	Code router, pool K3_10_48H	k3 (or -nocode)	Your own 10% code, for 48 hours / What if it's not for you?	unique 10%, 48 h

End day 5. No value split in cart (carts >= \$300 do not recover better).

3.3 Browse abandonment

Filters: no Added to Cart, Checkout Started or order since start; no cart, checkout or welcome email in 7 days; not in flow 7 days.

STEP	WAIT (WHY)	SPLIT / ROUTER	EMAIL	SUBJECT A	CODE
0	none	T01 50%			
1	1 hour (after 15 min only 1.9% buy within the hour; cart and checkout fire first)	TS Viewed Product Name contains COOK WORDS	b1 (T05a) / b1 - acc	Lab - tested: nothing on this pan to scratch off / Looked twice? Here's the detail.	HI10
2	2 days until 09:00 (78% of orders after a browse email land within 48 h)	CS Clicked Email where message = B1 (or B1 - acc) since start. Yes: code router, pool B2_10_48H. No: b2 - notclicked (accessory path: end)	b2 - clicked (or - nocode) / b2 - notclicked	Your own 10%, for the next 48 hours / Week one, in their words	unique 10%, 48 h

End day 3.

3.4 Welcome

Trigger: added to the pop-up list (Alia giveaway). Never re-enter. Every W email is **skipped** (not ended) if there is an order since start or a checkout or cart email in the last day.

STEP	WAIT (WHY)	SPLIT / ROUTER	EMAIL	SUBJECT A	CODE
0	none	T01 50% (old path keeps failure-to-launch until 20 Nov)			

STEP	WAIT (WHY)	SPLIT / ROUTER	EMAIL	SUBJECT A	CODE
1	20 min (20.3% buy within 10 min of signing up)	CS Placed Order since start: yes end (post-purchase takes over)			
2	none	CS Placed Order at least once ever: yes w0, then end	w0	Thank you. Now the first egg.	none
3	none (1.3% still buy on day 0 after the first hour)	A/B T04 50/50, no auto winner	w1 - a (code block) / w1 - b (gift card)	The pan with nothing on it (and your 10%)	HI10
4	1 day until 09:00 (first-order chance 0.50% on day 1)		w2 (plain text, Benjamin)	The pan nobody else was making	HI10 in P.S.
5	2 days until 09:00, day 3 (0.24%)		w3	Has your cookware actually been tested?	HI10
6	3 days until 09:00, day 6 (0.13%)	CS Country = US	w4 - us / w4 - int	Who are you cooking for?	HI10
7	4 days until 09:00, day 10 (0.09%; old day - 10 last call earned \$0.26 per recipient)		w5	Tammy is on her fourth pan	HI10

End day 14, then campaigns (new subscribers get no campaigns for 14 days).

3.5 Post-purchase (plus 5b delivery helper)

Filter: not in flow for 30 days. No T01 (before/after against the same weeks last period).

STEP	WAIT (WHY)	SPLIT / ROUTER	EMAIL	SUBJECT A	CODE
1	1 hour (confirmation; 72 to 78% of clicks go to care and use)	CS Placed Order = 1 ever	p1 - first / p1 - repeat	Good call. Here's what's coming. / Good to see you again	none

STEP	WAIT (WHY)	SPLIT / ROUTER	EMAIL	SUBJECT A	CODE
2	16 days until 09:00 (delivery median 11.7 days, p75 14.7; only 36% get a Delivered Shipment event)	TS Items any of COOKWARE + SET, no: skip. Yes: CS Delivered Shipment since start: yes skip (5b sent it), no p2-safe	p2-safe	When your pan arrives: the first egg	none
3	4 days until 09:00, day 20 (about delivery + 8 at median; 12.4% of repeat orders land in days 14 to 21)	CS Placed Order = 2 ever: end (VIP takes over). Cookware: SET or \$value >= 300 → p3-set; lid titles → p3-next; Pan Pro or shape pans → p3-pan; else p3-accessory. Non-cookware: e-gift card → end; owns cookware → p3-next; apron → p3-apron; else p3-accessory. Each via code router	p3-set / p3-next / p3-pan / p3-apron / p3-accessory	The pan your set is missing / What goes next to your pan / Which lid fits your pan? / An apron deserves a pan / Now meet the pan	unique 10%, 14 days
4	delivery + 14	existing review flow, unchanged	review		
5b	trigger Delivered Shipment, 1 day until 09:00 ("now your pan is here" must wait for delivery)	Filters: cookware order in last 30 days, no p2-safe in 30 days, no refund	p2	If you can do an egg, you can do anything	none

3.6 Winback

Trigger Placed Order, then wait. No re-entry limit: every new order restarts the clock, the old run stops on the send filter.

STEP	WAIT (WHY)	SPLIT / ROUTER	EMAIL	SUBJECT A	CODE
1	45 days until 09:00 (median time to 2nd order 35 days; 57% of repeat orders within 45 days)	Cookware + (SET or \$value >= 300) → r1-set; cookware → r1-pan; no cookware now but owns cookware → r1-pan; else r1-acc. Skip if a post-purchase or VIP email in 7 days	r1-set / r1-pan / r1-acc	The shapes a set leaves out / How's your pan doing? / Ready for the pan?	HI10 in email

STEP	WAIT (WHY)	SPLIT / ROUTER	EMAIL	SUBJECT A	CODE
2	30 days until 09:00, day 75 (day 60 to 90 still about 1%)	CS Placed Order at least 2 ever: code router R2_VIP_15_72H, else R2_10_72H	r2-vip / r2 (or - nocode)	For our regulars: 15% for 72 hours / 10% off your next piece, for 72 hours	unique 15% / 10%, 72 h

End day 90 (after that 0.6% per 30 days: campaign territory).

3.7 New flows

FLOW	STEP	WAIT (WHY)	SPLIT / FILTER	EMAIL	SUBJ
Site abandonment	1	2 hours (low intent, no own timing data yet)	No product view, cart, checkout or order since start; no order in 30 days; no browse/cart/checkout/post-purchase email in 7 days, no welcome in 10	a1	Not su pan? S
	2	2 days until 09:00	same	a2	Where people
Sunset	entry	Segment: profile older than 120 days, no human click 120 days, no site activity 120 days, no order 180 days, at least 8 emails received in 120 days. Opens ignored (Apple MPP)	not in welcome or post-purchase in 30 days		
	1	1 day until 09:00		s1	Should writing
	2	4 days until 09:00	no click, site activity or order since start	s2 (plain text, Benjamin)	Last e me (ur tap)
	3	3 days	CS click OR active on site OR order since start: sunset_status = kept , else suppressed + sunset_at ; weekly bulk suppression		

FLOW	STEP	WAIT (WHY)	SPLIT / FILTER	EMAIL	SUBJ
VIP	1	30 days until 09:00 after 2nd order	Code router SK_REGULARS15_14D (first 4 weeks 100% code); no refund, no order in 14 days; sets <code>siraat_regular = true</code>	v1 (or -nocode)	Twice Here's
	2	10 days until 09:00		v2 (plain text, Benjamin)	A ques Benjar
Anniversary	1	182 days until 09:00	First order with cookware; no refund; no VIP/winback email or support ticket in 14 days	n1 (service)	How's at six r
	2	183 days until 09:00 (day 365)	Code router SK_ANNIV10_7D; no order in 14 days	n2 (or -nocode)	One ye this we
UGC first egg	1	Delivery + 4 days until 09:00 (so it does not land next to P3)	First order, owns cookware; no ticket since start, no refund	u1 (reply-to support)	Show first eg

Sequence for a median first-time cookware buyer: P1 day 0, P2 day 13, U1 day 16, P3 day 20, review day 26, R1 day 45, R2 day 75.

4. Global rules

RULE	SETTING
Priority between flows	Nobody is in two sales flows at once. 1 Post-purchase > 2 Checkout > 3 Cart > 4 Browse > 5 Welcome > 6 Winback > 7 Site. Each lower flow does not start (or skips) if a higher flow sent an email in the last 7 days. Welcome emails are skipped, not ended, after a checkout or cart email in 24 h.
Exclusion mechanism	Klaviyo only checks "has been in <i>this</i> flow". For other flows: <code>Received Email where Flow = <exact flow name> zero times in the last N days</code> . Fallback if the Flow dimension is not available: one segment per flow ("received email from flow X in 7 days") and "is not in segment".
Smart Sending	Off in all flows (priority rules handle overlap).
Quiet hours	22:00 to 07:00 local for follow-ups, implemented as "wait X days, until 09:00". First emails (C1, K1, B1, P1, A1) go real-time, also in the evening (21 to 22 h converts as well as daytime).
Send time	09:00 profile time zone for all follow-ups (orders peak 09 to 12 h). Exception: C2 and K2 "wait 1 day" without time. No weekday filter (weekend is the strongest buying day). Profiles without time zone fall back to US/Eastern.
Frequency cap	Max 3 campaigns per profile per 7 days (segment excluded on every campaign); flow emails do not count. New subscribers: no campaigns for 14 days.

RULE	SETTING
Code cooldown	One unique code per person per 30 days, see router below. Discount ladder: sale + 4 gifts in every email; 10% (public HI10 or a unique code) only in the last email; 15% only VIP; never 20%+ in flows. One discount per order, so a unique code replaces HI10.
UTM	<code>utm_source=klaviyo</code> , <code>utm_medium=email</code> , <code>utm_campaign</code> = flow slug (<code>v4-checkout</code> etc., old path <code>old-<flow></code>), <code>utm_content</code> = <code><mailid>-<block></code> , <code>utm_term</code> = test arm (<code>t02-b</code>). Never a code or personal data in a UTM.
Attribution	Account window unchanged during tests (5 days click, 1 day open).
Triggers	No Triple Pixel triggers; one trigger per flow.

Code router (before every unique-code email: C4, K3, B2-clicked, P3, R2, R2-VIP, V1, N2):

```
`` CS "Cooldown?" Properties about someone · last_flow_code_at · is in the last 30 days
YES → <email>-nocode (gift stack, risk reversal; not counted in T02) N0 → A/B T02 50/50,
no auto winner A → <email> with {% coupon_code 'P00L' %} → Update profile property:
last_flow_code_at = today, last_flow_code_pool = P00L B → <email>-nocode `` Fallback if
Update Profile cannot set "today": code emails get a message name starting with "CODE ." and
the cooldown becomes "Received Email where Message Name starts with CODE · at least once
in 30 days".
```

5. Tests and measurement

TEST	WHERE	DESIGN	PRIMARY METRIC	DECISION
T01 old vs new	Checkout, cart, browse, welcome	Random sample 50% right after the trigger; profile property <code>v3_arm = new/old</code> + flow + date. Old path = best current path, same templates and delays	Revenue per entrant, 7-day cohort (welcome 14)	v4 to 100% on 20 Nov unless clearly worse (upper bound of 90% interval below 0) or a guardrail breaks
T02 code vs no code	Last email in checkout, cart, browse, post-purchase, winback (VIP and anniversary join after 4 weeks)	Pooled A/B 50/50 per email, strata per email; after the decision a permanent 10% holdout	Margin contribution per recipient	Code stays only if $P(\text{lift} > \text{breakeven}) \geq 80\%$. Breakeven at 60% margin: +20% buyers for 10%, +33% for 15%
T04 W1 framing	Welcome W1	HI10 as code block vs as "welcome gift card"	Unique click rate W1 (RPR as check)	B wins only at $P(B > A) \geq 90\%$ and RPR not worse

TEST	WHERE	DESIGN	PRIMARY METRIC	DECISION
T05a subject principle	Browse B1	Authority "Lab-tested: nothing on this pan to scratch off" vs social proof "100,000+ happy customers cook on this pan"	Unique click rate	

Phasing: phase 1 launch to 19 Nov; **BFCM freeze 20 Nov to 6 Dec** (old path off, T02 100% code, no new tests); phase 2 from 7 Dec (HI10 in early emails vs none, W1 subject, W3 hero, B2 length). Max 2 tests per flow.

Guardrails per arm (from 1,000 delivered): unsubscribe > 1.0% or > 1.5x control; spam > 0.10% or > 2x control (account never above 0.3%); bounce > 2%; refund rate +2 pp; sample ratio mismatch p < 0.01. Opens are never a metric (Apple MPP).

6. Email standard (see Figma for every email)

ELEMENT	STANDARD
Code bar	Above the header in every sales email: offer and code (or "4 gifts · 30-day returns" in no-code variants).
Hero with offer bar	The headline carries the idea; the offer sits in a bar on the hero image, readable on mobile.
Above the fold	Checkout and cart: hero, cart block (paid items only, no \$0 gifts), button. Browse: viewed product with price.
Buttons	First-person with benefit ("Complete my order", "Claim my 10% + gifts"), full width on mobile, max 3 identical primary buttons; links apply the code.
Friction reducer	Under every primary button: "Free shipping. 30-day returns. 100,000+ happy customers." (code and INT variants exist).
Real reviews	Selected and shortened only, never edited; one line of proof near the top, review block later; each sales email has one customer and one authority (lab report no. 25895).
Closer look / comparison	Max two big modules per email (comparison, closer look, value stack, size picker); max ~3,600 px on mobile.
Brand	Fixed header and footer with the SIRAAT lockup; founder voice is Benjamin; claims: 30-day returns, 75-year warranty, 100,000+ customers. Flows are calm, no em dashes, no hype words.

7. Before go-live

Build list (in order): decisions below → close leaking public codes → coupons → profile properties → segments → upload images and templates → flows on Draft → test sends → live per group.

ITEM	WHAT
Coupons (Shopify unique, 1 use, 1 per customer, expiry after assignment)	C4_10_48H, K3_10_48H, B2_10_48H (10%, 48 h); P3_THANKYOU_10_14D (10%, 14 days); R2_10_72H (10%), R2_VIP_15_72H (15%, 72 h); SK_REGULARS15_14D (15%, 14 days); SK_ANNIV10_7D (10%, 7 days). UGC15 as a separate bulk pool for the helpdesk.
Profile properties	v3_arm , v3_arm_flow , v3_arm_at , last_flow_code_at , last_flow_code_pool , siraat_regular , sunset_status , sunset_at
Segments	Sunset unengaged 120d, Sunset suppressed, Welcome protection (14 days), Campaign cap, Has cookware, VIP, US, T01 cohorts (4 flows x 2 arms), optional "email from flow X in 7 days"
Templates	61 emails built (all no-code variants included). Still to do: upload images to Klaviyo, UTM build, shorten 5 subject/preview lines, create templates named v4 · <flow> · <email>
Test sends	Test profile through every branch (pan, set, apron, board, gift card; US and INT; new and existing), coupon preview (same code everywhere in the email), /discount/ links with UTM, reply-to, sender name
Go-live groups	A: checkout, cart, browse, welcome (old flows to Draft, old path lives inside v4). B: post-purchase + helper, winback. C: sunset, site, VIP, UGC, anniversary. Nothing archived.

Open decisions that affect the build

DECISION	CURRENT CHOICE IN V4
C1 and K1 at 30 min instead of 1 hour	30 min
C2/K2 "1 day" (can land at night) or always "until 09:00"	1 day, no time
Keep HI10 in early emails at launch, test removal in phase 2	Keep, test later
No separate HI10 branch for list members in last emails	No branch (otherwise almost no unique codes go out)
Gross margin to confirm (all code breakevens depend on it)	60% assumed
Does Shopify already send a shipping email with tracking?	If not, add a tracking email
How long the \$349 six-piece listing stays live	Eight emails link to it
Close leaking public codes before T02	Required
Official rules page for the weekly filter draw	Needed before "draw closes Sunday" urgency

8. Questions for Homestead

1. **Routers on Items** . We route on `Items contains any of <exact titles>` in trigger splits (checkout, post-purchase, winback) and on product-name substrings for Added to Cart and Viewed Product. Is this reliable in Klaviyo (title changes, variants, multi-line orders), or would you use a catalog category, tags or a profile property instead? Does a trigger split support OR, or do we chain splits?
2. **Code cooldown**. Can an Update Profile action reliably write "today" into `last_flow_code_at` for a relative-date split, or should we go with the message-name fallback? Any experience with `{% coupon_code %}` appearing several times in one email?
3. **50/50 old against new in the same flow**. Random sample split right after the trigger, with the best old path rebuilt inside the v4 flow and a profile property per arm. Sound, or would you run old and new as separate flows? Is a 7-day cohort per entrant the right read?
4. **Quiet hours**. "Wait X days, until 09:00" in the profile's time zone, with real-time first emails. Pitfalls with time zones, the day-count rule, or very long delays (182 days)?
5. **Exclusions, sunset and suppression**. Cross-flow exclusion via "Received Email where Flow = X", sunset at 120 days with click/site activity as the only signals, weekly bulk suppression of `sunset_status = suppressed` . Anything you would change, including a faster sunset (45 to 60 days) for new subscribers?
6. **Deliverability**. Outlook spam rate is 0.31% (limit 0.3%), campaigns went to the full list with Smart Sending off, DMARC is p=none. What risks do you see when v4 adds flows and volume, and what should change first on the campaign side?
7. **Launch order and gaps**. What would you put live first, what is missing for us to build and launch this ourselves in Klaviyo, and where do you see the biggest risk of something breaking silently?
