

RETENTION · FLOWS

Flow update recommendations: *first round.*

Our July audit found the flows and audiences already built, with the emails inside them holding the account back. Here's the first round of fixes.

FROM THE JULY AUDIT

What we found.

Collection, flows, campaigns, and SMS were all already built. Content was the core opportunity.

"The flows and the audiences are already built. The content and the offer inside them are the ceiling." (Homestead Retention Audit, July 2026)

- ✓ Welcome had one broken email and one that leaned on a single review, nothing pointing people toward another product.
- ✓ Post-purchase fits five emails into six days, with no re-trigger inside 30 days and no real cross-sell.
- ✓ Win-back and cross-sell was the biggest miss in the account. Nothing brought people back to buy again based on what they'd already bought.
- ✓ SMS was live in Klaviyo and used in exactly zero flows.

WHAT THREE MONTHS CONFIRMED

Busier, and less efficient.

Here's the 90-day flow performance, pulled this month.

Flow revenue down 21% over the trailing 90 days (€471,771 vs. €599,063 prior 90), even as flow sends rose 22%.

Revenue per recipient down 35%, from €0.75 to €0.48. That's a content and sequencing problem, not deliverability or volume.

- ✓ Welcome Flow alone is 37% of flow revenue, and it's down 35% year over year.
- ✓ Post-Purchase and Failure-to-Launch are both high volume and returning a fraction of a cent per send.
- ✓ Customer Winback is still non-functional, exactly as we flagged in July and confirmed again in August.

FIRST-ROUND RECOMMENDATIONS

Where we'd start.

Four updates, in the order we'd build them. Each one closes a gap the July audit flagged, and the current data backs it up.

1. Welcome Series rebuild

- ✓ Replace the broken email and the review-only email with content that actually introduces people to more of the catalog: the titanium line, the salt-and-pepper mill set, the grill press, the cutting board (\$49–\$78).
- ✓ Add SMS. It's the biggest channel gap in this flow right now.
- ✓ This is the highest-leverage fix in the account. Welcome is 37% of flow revenue, down 35% in 90 days, and every original message in it lost 17–62% of its revenue.

2. Post-Purchase & Cookware Education refresh

- ✓ Split this into a pre-delivery and post-delivery flow, and pace it to the real 6–12 month repurchase window instead of cramming five emails into six days.

-
- ✓ Fold in the new activation video. It's the fix for Failure to Launch, which is returning €0.05 per recipient, and for the Post-Purchase activation email.
 - ✓ Confirm the shipping and tracking data is actually live before we write pre-delivery content around it. July's audit flagged this as unclear.

2. Customer Winback rebuild

- ✓ Resolve the duplicate A/B test running on the flow's second email, then rebuild win-back around what people actually tend to buy again, targeting the 45–90 day window after their first order.
- ✓ Add SMS here. Nothing in this flow uses it today.
- ✓ Confirm the sender-name fix we flagged in August actually shipped.

4. Cross-sell and Back-in-Stock

- ✓ Build the cross-sell the July audit called the account's biggest miss: point pan buyers toward cookware extensions and utensils, bundle buyers toward accessories and gifting, and accessory buyers toward core cookware.
- ✓ Add education and cross-sell to Back-in-Stock. It's already the best revenue per recipient in the account at €8.56, and right now it does nothing beyond the restock notice.

SEQUENCING

How we'd roll this out.

Round one: Welcome flow refresh. These carry the most revenue and need fixing first.

Round two: Post-Purchase and Cookware Education, timed with the new activation-video content.

Following rounds: Winback, Cross-sell, and Back-in-Stock, followed by pop-up, quiz, and Grill Master.
